CELLFEE

SAMPLE BATTERY DIAGNOSTIC & SECOND-LIFE ASSESSMENT REPORT

DEMO REPORT — SYNTHETIC DATA ONLY
This is a sample format for project testing, not an actual laboratory certificate or safety clearance.

1. Battery & Test Details

Report ID	CELLFEE-RPT-DEMO-0001	**Test Date**	29 Oct 2026
Battery ID	EVB-KA-2048	**Chemistry**	Lithium-ion (NMC)
Rated Capacity	60.0 Ah	**Nominal Voltage**	3.7 V (cell-level reference)
Test Type	Retired battery screening	**Test Status**	Sample / simulated

2. Test Measurements

Parameter	Measured / Recorded Value	Illustrative Interpretation
Measured capacity	48.6 Ah	81.0% of rated capacity
State of Health (SoH)	81.0%	Estimated from sample capacity data
RE now (resistance)	0.078 Ω	Compare with beginning-of-life value
RCT now	0.118 Ω	Charge-transfer resistance reference
Cycle count	620 cycles	Recorded cycle count
Operating temperature	27 °C	Temperature at test / record
RE at beginning of life	0.065 Ω	Reference value provided
RCT at beginning of life	0.090 Ω	Reference value provided
Transport distance	145 km	Estimated logistics distance

3. Illustrative Assessment Summary

MODEL SCREENING RESULT: Potential second-life candidate for further evaluation

Illustrative rationale: the sample record reports 81.0% state of health, 620 cycles, and a recorded temperature of 27 °C. These values are shown to demonstrate the report layout only. They do not establish pack compatibility or certify safe reuse.

4. Recommended Next Actions

1	Perform approved electrical and physical safety inspection.
2	Verify capacity and resistance using calibrated test equipment.
3	Check swelling, leakage, insulation, thermal history and manufacturer limits.
4	If eligible, assess compatibility with the intended second-life pack and application.

5. Limitations & Authorization

This document contains invented values created solely for demonstrating the CELLFEE report workflow. It is not based on a physical battery test, is not signed by a testing laboratory, and must not be used for purchasing, reuse, transport, warranty, or safety decisions.

Final disposition requires validated test procedures and qualified personnel.

Prepared for: CELLFEE project prototype | Status: SAMPLE ONLY | Authorized signature: Not applicable
